19. The oral dosage form of claim 1 [11], wherein the sustained release carrier further causes said opioid antagonist to be released over a time period of about 8 to about 24 hours when orally administered to a human patient.

20. The oral dosage form of claim 1 [19], wherein the sustained release carrier further causes the acetaminophen to be released over a time period of about 8 to about 24 hours when orally administered to a human patient.

27. The oral dosage form of claim 1, wherein said [further comprising a] sustained release carrier [which] causes said antagonist and said acetaminophen [the drugs] to be released over a time period of about 8 to about 24 hours when the dosage form is orally administered to a human patient.

32. A method of treating pain, comprising administering an oral dosage form which contains an opioid agonist and acetaminophen in amounts which render the dosage form analgesically effective when orally administered, the oral dosage form further including an opioid antagonist and a sustained release carrier which causes said opioid agonist to be released over a time period of about 8 to about 24 hours when orally administered to a human patient.

Please add the following new claims:

37. The oral dosage form of claim 1, wherein the sustained release carrier causes said opioid agonist to be released over a time period of about 12 hours when orally administered to a human patient.

38. The oral dosage form of claim 1, wherein the sustained release carrier causes said opioid agonist to be released over a time period of about 24 hours when orally administered to a human patient.
